

# Messenger Dead-ends

## Construction

The Messenger Dead-end Grips are made of preshaped aluminum coated steel wires that are helically shaped to the appropriate size for the messenger that is being terminated.

## Features

- Longitudinal Holding Strength equal to messenger UTS
- Uniform radial pressure exerted on the messenger
- Designed for specific messenger sizes
- Color coded for ease of selection in field

## Application

The Messenger Dead-end Grips are designed to grip the messenger uniformly providing superior holding force while not deforming the messenger. They are used to secure the messenger at the dead-end structure. Appropriate size and strength thimble clevis must be selected.

Southwire Stock #	Description	Length (in)	Color Code	Messenger Wire (in)	Weight (lbs)	Rated Holding Strength (lbs)
